

# CG FEED - \$500

## Jovial Gaming:

An app where users connect and play each other on video games offline and report score on app. There's rankings, badges, tournaments, location based comp grounds and zones.

### How the App works:

Users upon sign up are placed in a Comp Ground and a Zone using OpenGate API their location is reversed geocoded.

Comp ground is a group of users in a area within 10 miles of each other.

Zone is all users that are placed in a in a specific area like a major city

For example: a City like Manhattan is a zone and in Manhattan you'll have multiple Comp Grounds all over the zone.

Users can travel freely in between zones and the api will automatically switch them into that zone.

Comp grounds are different for a user to switch Comp Grounds the user must be active in the comp ground they are looking to switch to for 30 days.

\*\*\*\*\* This is important because whatever feed or zone user is in that will be their feed\*\*\*\*\*

Goal: Create a Feed updating users of everything that happens in a Comp Ground and a Zone

phrases\_by\_category = {

**"Match Wins": [**

"@{winner} just took down @{loser}",

"@{winner} defeats @{loser} in a close one",

"@{winner} silences the noise from @{loser}",
